

Overview

Thank you for downloading Chibi Hair version 1.0!

This asset comes with 29 different hair styles, 2D icons for each hair, a wig stand, and example assets. The entire Example folder can be safely deleted if you no longer need it in your project.

Note: This asset is designed exclusively to go with the [Chibi Character](#) asset. The hair in this package is unlikely to fit other characters due to its stylized nature. You can download the Chibi Character asset for free on the Unity Asset Store:

<https://assetstore.unity.com/packages/3d/characters/chibi-character-313963>

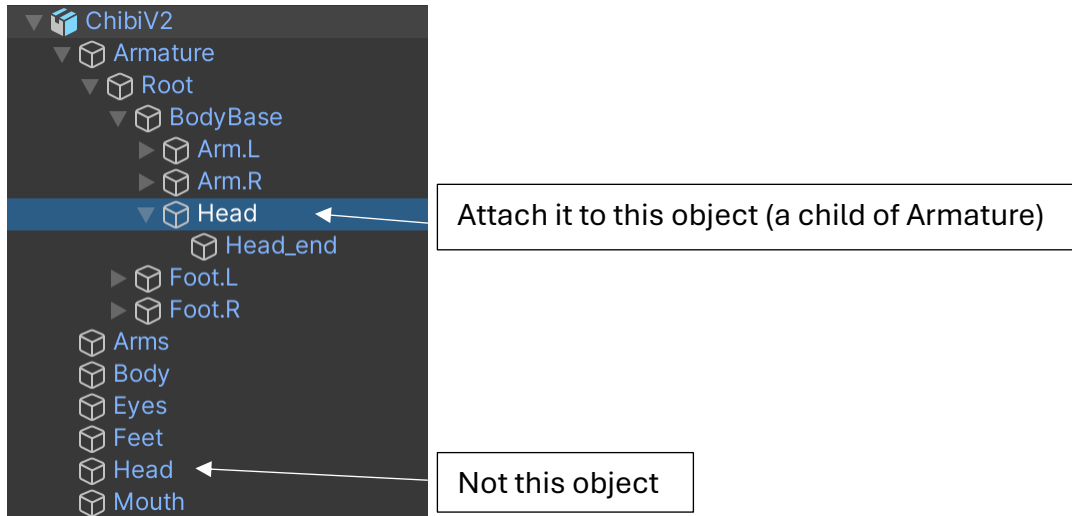

If you have any questions about the asset then feel free to reach out through email:

dreamnoms@gmail.com

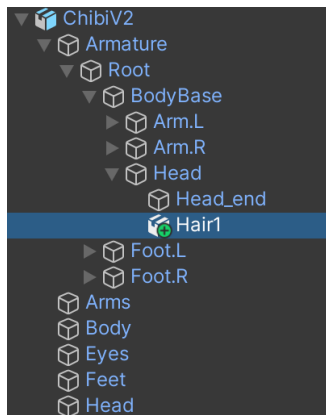

Read below to learn how to correctly attach the Hair to the head.

Setup

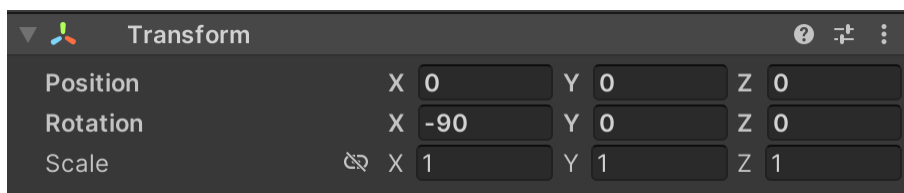

The Hair should be attached to the Head object that is a child of Armature (Armature>Root>BodyBase>Head). It should **not** be attached to the Head object that contains a skinned mesh renderer.

Drag your desired Hair Prefab onto the Head bone (not the Head_end bone):

Then, on the Hair object set the Rotation X to -90:

The hair should be sitting perfectly on the head.

If you want to swap the hairstyle in-game, you can change the Mesh Filter's mesh (see Example>HairDemo scene and Example>Scripts>HairSelector.cs as an example).
